

Bluom — UGC Creative Brief

Performance Pilot Program (English)

What Bluom is

Bluom is a multi-niche health & wellness app, not a single-purpose fitness or weight-loss app. It's marketed on the App Store through separate Custom Product Pages for different audiences — fasting/metabolic health, hormone & cycle syncing, mental clarity/stress, men's health, and goal-setting/productivity, among others — and the core app itself covers nutrition tracking, activity tracking, sleep & mental health, women's and men's health, productivity, focus, and recipes. Content can come from any of these angles — pick whichever genuinely fits your life and audience, not all of them.

Tone & do-not-list

Please avoid: before/after transformation framing, specific weight-loss numbers or claims, 'metabolic booster'/'fat burning' language used as a promise, diet-culture guilt messaging, or comparing Bluom to medications. Lean into: honest, realistic daily routines, small wins, and a genuinely no-guilt tone.

Content angles — pick what fits you

- **Daily Dashboard & Vitality Score**
The home screen blends sleep, nutrition, and activity into one daily 'Vitality Score,' with a time-of-day greeting and local weather. Good as a quick 'this is my Bluom' intro.
- **Fuel — Nutrition & Macro Tracking**
Log meals by AI photo scan or voice, track protein/carbs/fat and calories, a water tracker, and fasting-window integration. Show a real meal logged and your daily summary.
- **Move — Workouts & Activity**
Steps and active time synced from Health apps, workout logging, calories burned, and an AI-generated workout plan that adapts over time. Any activity level works, not just intense fitness.
- **Mental Health & Sleep Hub**
Sleep tracking (with a nightstand sleep monitor), mood logging, guided meditation, a gratitude journal, brain games, and a personalised AI 'Mental Health Blueprint.'
- **Getting to Know Your Cycle**
Cycle-phase tracking (menstrual, follicular, ovulation, luteal) with phase-specific guidance on energy, workout type, nutrition, and mood.
- **Men's Health Optimization Hub**
Six pillars — sleep, stress, vitality, recovery, focus, activity — with a daily protocol and tips. Best suited to male creators or a male-focused audience.
- **Fasting Tracker**
Choose a protocol (16:8, 18:6, 20:4, OMAD), time your fasting window, and see real-time metabolic phase insight.
- **Sugar Control — 90-Day Reset**
A daily check-in habit tracker for cutting back on added sugar, with a streak meter and a 90-day reset challenge. Habit-change framing, not medical.

- **Weight & Goal Tracking**

Log weight, see your trend, and set a personal goal (with BMI reference). Keep it factual — logging and trend-watching, not transformation content.

- **Personalized Productivity Hub**

A short setup quiz tailors task templates and AI tips to how you work. Tasks have priority, category, due date, time estimate, and notes.

- **Deep Focus Sessions**

A simple deep-work timer: start a session, stay off other apps, get a small celebration when it's done. Show starting a session before a real task.

- **Simple Recipes, Real Ingredients**

A categorised recipe library (breakfast, lunch, dinner, snacks, desserts, vegetarian, high-protein, low-carb) with nutrition facts, one-tap meal logging, and an auto shopping list.

Deliverables & format

1 vertical video (Reels-style), 30–60 seconds, filmed in your natural style (no studio look, no script read to camera). Voiceover or on-camera talking both fine. Show the app screen naturally in at least one moment (screen recording or phone-in-hand is fine).

Compensation

This program pays 12% of purchase value generated from your content, paid weekly, tracked through Trybe. No flat upfront fee at this stage — commission accrues once content is approved and used in ads or organic placements.
